Asia AUM

Korean retail holdings are sourced directly from the Korea Securities Depository (KSD), while Korean institutional holdings come from publicly available sources. Both are updated monthly. The majority of Japanese brokerage data is received monthly from individual brokers. Other Asian brokerage, intermediary, and market data are received monthly, quarterly, or on an ad-hoc basis. Asia-related investor positions reported in 13F filings are reviewed and updated on a quarterly basis.

In the event of delayed data, share counts are held constant and AUM is marked-to-market based on the latest month-end NAV. Share counts are updated and back-adjusted once the new data is received.

Global AUM

- Sourced from Bloomberg as of each month-end
- Covers all REX ETPs across ETFs and ETNs
- Used to calculate each fund's percentage of global AUM held in Asia and to decompose AUM changes into market impact and investor flows

Estimated Flows

- Each fund's month-over-month Asia AUM change is split into two components: market impact and estimated investor flows
- Market impact is the portion of the change attributable to the fund's global price movement
- Estimated flows are the residual — the AUM change not explained by price movement, representing net new investment or redemptions
- These are estimates. Actual fund flows, where disclosed by managers, may differ
