Asia AUM

- Collected monthly from brokerage firms and custodians across 16 exchanges in 7 Asian markets
- Some brokers report AUM directly in local currency (KRW, JPY), converted to USD at month-end rates. Others report share counts, priced using Bloomberg month-end closes
- Quarterly reporters (Futu/MooMoo, Oriental Harbour, ViewTrade) provide data at quarter-end only. Between reports, positions are adjusted by each fund's global price change to avoid reporting stale values
- These quarterly estimates are replaced with actuals when new reports arrive

Global AUM

- Sourced from Bloomberg as of each month-end
- Covers all REX ETPs across ETFs and ETNs
- Used to calculate each fund's percentage of global AUM held in Asia and to decompose AUM changes into market impact and investor flows

Estimated Flows

- Each fund's month-over-month Asia AUM change is split into two components: market impact and estimated investor flows
- Market impact is the portion of the change attributable to the fund's global price movement
- Estimated flows are the residual — the AUM change not explained by price movement, representing net new investment or redemptions
- These are estimates. Actual fund flows, where disclosed by managers, may differ
