

US Equity Callable Note Issuance

Autocallable & issuer-callable notes linked to US equities · 2021–2026 YTD · 19-issuer EDGAR census · 2026 through Apr 13

Year	Single-name	Worst-of baskets	Equity total	+ Indices	Equity incl. index
2021	1,648	16,017	17,665	5,179	22,905
2022	1,161	12,060	13,221	5,818	19,070
2023	1,663	14,650	16,313	6,557	22,912
2024	2,454	22,603	25,057	7,112	32,208
2025	2,595	27,092	29,687	7,317	37,080
2026	854	8,531	9,385	2,636	12,049
Total	10,375	100,953	111,328	34,619	146,224

Key takeaways

- **Strong growth.** Equity callable issuance (single-name + worst-of baskets) rose ~68% from 17,665 notes in 2021 to 29,687 in 2025 — a record year. 2026 is tracking similarly through April.
- **Baskets dominate.** Worst-of equity baskets are ~90% of equity callable notes; pure single-name notes are a smaller (but growing) slice.
- **Issuer concentration.** JPMorgan, UBS, Bank of America, Goldman Sachs lead the equity callable market. Credit Suisse exits after 2023 (post-collapse).
- **Most-referenced single names:** NVDA, TSLA, AAPL, AMZN, AMD — concentrated in mega-cap tech/AI.
- **Terms richening.** Average coupon climbed from ~11.0% (2021) to ~13.0% (2025), with barriers steady near ~68% of initial. Median ticket ~\$1.2mm.

Scope & method

Source: SEC EDGAR 424B2 pricing supplements, fully extracted across 19 major issuers — a complete census of those issuers, not a sample. Counts are final supplements only (preliminary excluded). 'US equity' is approximated by single-name + worst-of equity underliers; indices shown separately and may include non-US. Note count is the headline metric — dollar notional contains program-level outliers and is unreliable for totals. Full breakouts by issuer, subtype, underlier and terms are in the accompanying Excel workbook.
