OVERVIEW

- Korea (72.5%) and Hong Kong (26.4%) dominate MicroSectors distribution in Asia
- Gold exposure (GDXU, SHNY) drove the suite's positive MoM in an otherwise negative market
- ViewTrade contributed \$7.2M from Hong Kong brokerage channels
- Korea's share has recovered from 59.8% (Sep '25) to 72.5% (Feb '26) as the Korean retail market absorbed more MicroSectors products
- BULZ attracted \$102M in est. net inflows — the largest single-fund Asia flow across all REX products this month

OVERVIEW

- Japan dominates EPI distribution at 69% (\$77.8M) — the only suite where Japan leads over Korea
- Korea at 28% (\$32.0M) is the second-largest market, with Hong Kong at 2%
- All three funds maintain similar Asia AUM (\$35–41M each) — no single-fund concentration
- Japan surpassed Korea as the #1 EPI market in Sep '25, jumping from 34% to 67% — driven by institutional demand for covered call income strategies
- Distribution has grown from \$25M to \$113M in 11 months — the fastest-growing REX suite in Asia by percentage growth

OVERVIEW

- TSII and NVII represent 90% of G&I Asia AUM — high concentration risk
- Korea dominates G&I at 92.2% (\$16.1M) — the most concentrated suite geographically
- Suite remains small at \$17.4M with Japan at 5% and Singapore at 2%
- Japan (\$0.9M) and Singapore (\$0.3M) represent early-stage distribution — potential growth markets as single-stock income products gain traction
- COII (\$400K) was recently reclassified from Equity Premium Income to Growth & Income to align with its single-stock covered call strategy

Methodology

Data Sources. Asia AUM is compiled from broker reports covering 16 exchanges across 7 markets. Prices and global fund AUM are sourced from Bloomberg as of month-end. 13F filings are sourced from SEC EDGAR.

Reporting Formats. Brokers report in different formats: some provide AUM in local currency (converted to USD), others report share counts which are priced using Bloomberg month-end closes. Quarterly reporters (MooMoo, Futu, Oriental Harbour) provide share counts at quarter-end only.

Quarterly Estimation. Between quarterly reports, Asia AUM for quarterly reporters is estimated using fund-proportional scaling. Each exchange maintains its proportional share of the fund's total AUM as reported by Bloomberg. This method captures fund-level flows that pure mark-to-market would miss. Stale carry-forward dollar values from prior quarters are not used.

Estimated Flows. Net flows are estimated from the difference between AUM changes and market movements. These are estimates derived from publicly available data; actual fund flows, where disclosed by managers, may differ.
